

ADVANCED MOTION CONTROLS

AMC CONFIGURATION ENVIRONMENT

©2019 Version 1.2019.4

Release Notes

ACE™ is free software for use in commissioning and setup of *ADVANCED* Motion Controls' FlexPro™ servo drives.

ACE™ provides the ability to set drive limits, tune the current, velocity, and position control loops, and assign automated functions to drive events. The fully functional multi-channel oscilloscope eases system setup and assessment.

Documentation and support are available on the *ADVANCED* Motion Controls' web site (www.a-m-c.com), or contact Technical Support by phone at 805-389-1935.

Compatibility

- **ACE 1.2019.4** is only compatible with FlexPro™ servo drives. DigiFlex® Performance™ drive models must continue using DriveWare®.

New Features in ACE™ 1.2019.4

- Added full support for AC Induction motors.
- Initial support for Jerk Limiting
- Added initial support for Ethernet IP drives

Known Issues

- AC Induction Motor Stator Limits not properly displaying limits.
- In the Motion Panel, the "Loop over forward and reverse motion" feature for Indexes can cause Position Following Error faults.
